General Guidelines for Developing Emergency Action Plans

- **1. Establish Roles** adapt to specific team/sport/venue, may be best to have more than one person assigned to each role in case of absence/turnover
 - Immediate care of the athlete
 - Typically physician, ATC, first responder but also those trained in basic life support
 - Activation of Emergency Medical System
 - o Could be school administrator, anyone
 - Emergency equipment retrieval
 - o Could be student assistant, coach, anyone
 - Direction of EMS to scene
 - o Could be administrator, coach, student assistant, anyone

2. Communication

- Primary method
 - o May be fixed (landline) or mobile (cellular phone, radio)
 - o List all key personnel and all phones associated with this person
- Back-up method
 - o Often a landline
- Test prior to event
 - o Cell phone/radio reception can vary, batteries charged, landline working
 - Make sure communication methods are accessible (identify and post location, are there locks or other barriers, change available for pay-phone)
- Activation of EMS
 - o Identify contact numbers (911, ambulance, police, fire, hospital, poison control, suicide hotline)
 - Prepare script (caller name/location/phone number, nature of emergency, number of victims and their condition, what treatment initiated, specific directions to scene)
 - o Post both of the above near communication devices, other visible locations in venue, and circulate to appropriate personnel
- Student emergency information
 - o Critical medical information (conditions, medications, allergies)
 - Emergency contact information (parent / guardian)
 - Accessible (keep with athletic trainer for example)

3. Emergency Equipment

- e.g. Automated External Defibrillators, bag-valve mask, spine board, splints
- Personnel trained in advance on proper use
- Must be accessible (identify and post location, within acceptable distance for each venue, are there locks or other barriers)
- Proper condition and maintenance
 - document inspection (log book)

4. Emergency Transportation

- Ambulance on site for high risk events (understand there is a difference between basic life support and advanced life support vehicles / personnel)
 - Designated location
 - o Clear route for exiting venue
- When ambulance not on site
 - o Entrance to venue clearly marked and accessible
 - o Identify parking/loading point and confirm area is clear
- Coordinate ahead of time with local emergency medical services

5. Additional considerations

- Must be venue specific (football field, gymnasium, etc)
- Put plan in writing
- Involve all appropriate personnel (administrators, coaches, sports medicine, EMS)
 - o Development
 - Approval with signatures
- Post the plan in visible areas of each venue and distribute
- Review plan at least annually
- Rehearse plan at least annually
- Document
 - o Events of emergency situation
 - o Evaluation of response
 - o Rehearsal, training, equipment maintenance

Additional Considerations for Specific Conditions When Developing an EAP

1. Sudden Cardiac Arrest

- Goal of initiating Cardio-Pulmonary Resuscitation within 1 minute of collapse
 - Targeted first responders (e.g. ATC, first responders, coaches) should receive CPR training and maintain certification
- Goal of "shock" from a defibrillator within 3-5 minutes of collapse
 - o Consider obtaining Automated External Defibrillator(s)
 - Understand that in most communities the time from EMS activation to shock is 6.1 minutes on average and can be longer in some places
 - Appropriate training, maintenance, and access
 - Notify EMS of AED type, number, and exact location
- Additional equipment to consider beyond AED
 - o Barrier shield device/pocket masks for rescue breathing
 - o Bag-valve mask
 - Oxygen source
 - Oral and nasopharyngeal airways

2. Heat Illness

- Follow NCHSAA heat and humidity guidelines
- Inquire about sickle cell trait status on Pre-Participation form
 - o consider those with the trait to be "susceptible to heat illness"
 - o those with the trait should not be subject to timed workouts
 - o those with the trait should be removed from participation immediately if any sign of "exhaustion" or "struggling" is observed
- If heat illness is suspected
 - o Activate EMS immediately
 - o Begin cooling measures
 - Shade, cool environment
 - Ice water immersion, ice packs, soaked towels, fan and mist
- Any victim of heat illness should see a physician before return to play

3. Head and Neck injury

- Athletic trainer / First responder should be prepared to remove the face-mask from a football helmet in order to access a victim's airway without moving the cervical spine
- Sports medicine team should communicate ahead of time with local EMS
 - Agree upon C-spine immobilization techniques (e.g. leave helmet and shoulder pads on for football players) which meet current local and national recommendations/standards
 - Type of immobilization equipment available on-site and/or provided by EMS
- Athletes and coaches should be trained not to move victims

4. Asthma

- Students with asthma should have an "asthma action plan"
 - Lists medications, describes actions to take based on certain symptoms and/or peak flow values as determined by a licensed physician / PA / NP
 - o On file with sports medicine coordinator
 - o Available at games / practice / conditioning
 - o Can be same as that on file with school nurse
- Students with asthma should have:
 - o Rescue inhaler and spacer if prescribed
 - Readily accessible during games / practice /conditioning
 - Athletic trainer / first responder should have an extra inhaler prescribed individually for each student as back-up
 - Before each activity test to be certain it is functional, contains medication, is not expired
 - o Pulmonary function measuring device
 - Use in coordination with asthma action plan

5. Anaphylaxis

- Documentation of known anaphylactic allergy to bee stings, foods, medications, etc. should be on file with sports medicine coordinator
 - o Describes symptoms that occur

- What action to take if specific symptoms occur
- Students with known anaphylactic allergy should have
 - o Rescue prescription medication (usually an epi-pen)
 - Readily accessible during games / practice /conditioning
 - Athletic trainer / first responder should have an extra supply of the rescue medication prescribed individually for each student as back-up
 - Before each activity examine to be certain it is functional, contains medication, is not expired

6. Lightning

- Assign the role of monitoring for threatening weather conditions
 - o Typically athletic trainer, administrator
 - o Discuss in advance of games the role of this person (Baseball, softball, football)
- Methods to monitor for lightning risk
- Consult National Weather Service or local media for severe weather watches and warnings
- Flash-to-bang method
 - Count the time in seconds that passes between a "flash" of lightning and the "bang" of thunder that follows. If count is less than 30 seconds stop activity and seek safe shelter
- Communicate the need to stop activity and seek shelter
 - o P.A. announcement
 - o Signal sound from a horn, siren, whistle, bell
- Identify safe shelter for each venue and be sure it is accessible (within reasonable distance, unlocked, capacity)
 - o Building (with four walls, a ceiling, and plumbing or wiring that acts to electrically ground the structure)
 - o Secondary option is a metal roof vehicle with all windows completely rolled up
 - Last option is thick grove of small trees surrounded by larger trees or a dry ditch assuming proper posture (crouch, grab knees, lower head, minimize contact with ground)
- Determine when to resume activity
 - Flash-to bang count greater than 30 seconds or pre-determined time period (usually 30 minutes) after last visible lightning

**This is a sample Emergency Action Plan meant to be used as a guide to help you develop a venue-specific plan for your school. Please use the blank spaces and bolded notes to help fill in details that are unique to your school's athletic venues. Please provide your school's Emergency Action Plan to all coaches, administrators, adult volunteers, etc involved in interscholastic athletics. This plan should also be reviewed and updated annually as needed and shall be posted in a conspicuous location. **

(Insert School Name Here) Emergency Action Plan

EMERGENCY ACTION PLAN

School has a written emergency plan that should be followed in the event of a
medical emergency. All coaches should be familiar with this document and their role and
responsibility in an emergency. Any questions should be directed to the head athletic trainer (or
school administrator, in the absence of a licensed athletic trainer).

An *emergency* is the need for Emergency Medical Services (EMS) to give further medical attention and/or transport an athlete to the hospital. It is important in these situations that coordination between the athletic trainer, coaches, administrators and student responders be effective. This guide is intended to delineate roles and outline the protocol to be followed should an emergency occur. Situations when 911 should be called are:

- an athlete is not breathing
- an athlete has lost consciousness
- it is suspected that an athlete may have a neck or back injury
- an athlete has an open fracture (bone has punctured through the skin)
- severe heat exhaustion or suspected heat stroke
- severe bleeding that cannot be stopped

Chain of Command

Team Physician
Certified Athletic Trainer
School Resource Officer
Athletic Director
Administrator
Head Coach
Assistant Coach
Sports Medicine Student Assistant
Other Athletes

The highest person in the chain of command who is present at a scene will be the designated person in charge, or leader. That person is responsible for deciding whether or not to call 911, instructing others how they may be of help and will be the person who stays with the athlete until EMS arrives.

Once it has been decided that EMS should be called, the following protocol should be followed:

administrator should be notified that there is an emergency situation on campus.
2. The highest person on the chain of command will make the call to EMS or will designate another person to make the call. (911 from a cell phone or pay phone, insert any specifi instructions pertinent to your school's internal phone system here) EMS should be told what the emergency is, the condition of the athlete and how to get to where the athlet is. Also, tell EMS that someone will meet them at the closest intersection to aid in directin the ambulance. DO NOT HANG UP UNTIL EMS HANGS UP FIRST.
 Phones at School are located in the main office, classrooms, coaches offices, the training room and in the front lobby of the school, insert any other pertinent location here. Also, list who on the chain of command has a cellular phone.
4. The leader will send runners to all intersections between where the athlete is located and School/venue-specific location to direct the ambulance to the athlete. The runners should stay in their positions and wave the ambulance through the proper turns to get to the athlete.
 The leader will designate another person to attempt contact with the athlete's parents. Emergency contact information can be found which coaches, athletic trainers, designated individual should have with them at all times. If a parent is not present, the form should accompany the athlete to the hospital.
 If transport is deemed necessary by EMS, the athlete will be taken to insert nearest medical center name(s) and address(es) here, unless the parent requests otherwise.
School is located at:
sert school address here
e closest intersection to the school is and sert any other pertinent intersections or landmarks here.
ocation of AED's

1. The highest person on the chain of command will be deemed the leader, and will stay with the athlete to monitor the athlete's condition and administer necessary first aid. If possible, someone else on the chain of command should also stay and assist. The front office or an

L

1. List all specific locations where AED's are located in and around your school. If your school has multiple AED's, it may also be helpful to develop a map of AED zones along with the list of where they are located (see sample), so that each zone has access to an AED.

*Coaches should take note of the closest AED to their practice and game locations.

ADDRESS:

123 Middle Creek Park Ave Apex, NC 27539

IMPORTANT PHONE NUMBERS:

Athletic Trainer: 868-0499 (C) or 661-5474 (O)

First Responder: 820-0199

EMS: 911 or 9-911 if calling from a school phone

Main Office: 773-3838

Athletic Director's: 868-6795 (C) or 773-3854 (O)

School Resource Officer: 868-6795

Principal's: 625-8294

ZONE 1 (Main Gymnasium, Outside Basketball Courts, and Main Building)

EMS Route: West Lake to Middle Creek Park Ave- Entrance #1

Primary AED: Outside of Main Office Secondary AED: Community Center

ZONE 2 (Baseball Field, Softball Complex, Multi-purpose Fields)

EMS Route: West Lake to Middle Creek Park Ave- Entrance #2 Primary AED: Softball Complex or Home Dugout on Baseball Field Secondary AED: Home Dugout on Baseball Field or Softball Complex

ZONE 3 (Community Center Gymnasium, Auxilary Gymnasium, Athletic Hallway, Stadium, Practice Fields)

EMS Route: West Lake to Optimist Farm Road- Entrance #3

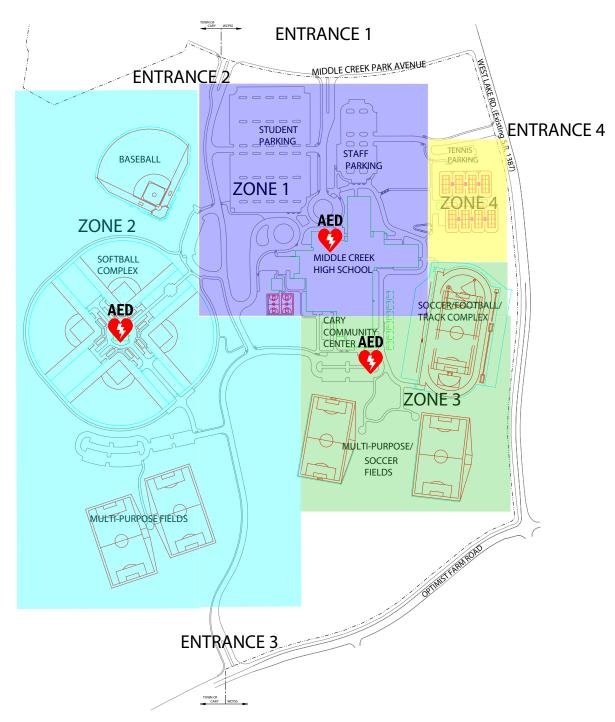

Primary AED: Community Center Secondary AED: Main Office

ZONE 4 (Tennis Courts, Mobil Units)

EMS Route: West Lake - Entrance #4

Primary AED: Main Office

Secondary AED: Community Center

ZONE 1:EMS ROUTE-WEST LAKE ROAD TO MIDDLE CREEK PARK AVE TO ENTRANCE 1. PRIMARY AED: OUTSIDE MAIN OFFICE. SECONDARY AED: COMMUNITY CENTER

ZONE 2:EMS ROUTE-WEST LAKE ROAD TO MIDDLE CREEK PARK AVE TO ENTRANCE 2. PRIMARY AED: SOFTBALL COMPLEX, SECONDARY AED: OUTSIDE MAIN OFFICE

ZONE 3:EMS ROUTE-WEST LAKE ROAD TO OPTIMIST FARM ROAD TO ENTRANCE 3. PRIMARY AED: COMMUNITY CENTER. SECONDARY AED: OUTSIDE MAIN OFFICE

ZONE 4:EMS ROUTE-WEST LAKE ROAD TO ENTRANCE 4. PRIMARY AED: OUTSIDE MAIN OFFICE. SECONDARY AED: COMMUNITY CENTER

MIDDLE CREEK HIGH SCHOOL 123 MIDDLE CREEK PARK AVENUE APEX, NC 27539 MAIN OFFICE: 919-773-3838 ATHLETIC TRAINER: 868-0499
